

Übungen:

$$\frac{2}{3} + \frac{5}{7} = 1\frac{8}{21}$$

$$\frac{2}{3} + \frac{3}{6} + \frac{1}{2} = 1\frac{2}{3}$$

$$\frac{11}{13} + \frac{1}{3} = 1\frac{7}{39}$$

$$\frac{3}{5} - \frac{1}{3} = \frac{4}{15}$$

$$\frac{3}{6} - \frac{1}{4} = \frac{1}{4}$$

$$\frac{25}{25} - \frac{8}{4} = -1$$

$$\frac{8}{16} - \frac{1}{2} = 0$$

$$\frac{5}{9} * \frac{2}{4} = \frac{5}{18}$$

$$\frac{2}{15} * \frac{1}{2} = \frac{1}{15}$$

$$\frac{10}{1} * \frac{4}{1} = 40$$

$$\frac{3}{5} : \frac{1}{2} = 1\frac{1}{5}$$

$$\frac{9}{3} : \frac{3}{7} = 7$$

$$\frac{12}{15} : \frac{1}{3} = 2\frac{2}{5}$$

$$\frac{4}{8} : \frac{4}{4} = \frac{1}{2}$$
